Division of Land Pollution Control
Environmental Protection Agency
117 West Main Street
Collinsville, Illinois 62234

EPA Region 5 Records Ctr.

291055

Dear Mr. Mensing:

Information on Closed Disposal Site; Amoco Riverfront, Wood River

As agreed in our November 27, 1984, meeting, we are enclosing the data and information on the closed disposal site on Amoco's riverfront property in Wood River.

The enclosure consists of the following:

1. Past monitoring data from wells around the site.
2. Design and construction details comprising:
 - a. a "Technical and Cost Proposal";
 - b. a "Data and Design Report";
 - c. "Test Results"; and
 - d. as-built drawings.
3. A groundwater monitoring program satisfying the requirements of Subpart F.

As was discussed with you by phone January 28, the priority pollutant analysis of the January, 1984 samples (Table IV) indicated possible laboratory contamination. Therefore, we delayed sending you this package in order to enclose analytical results from the December, 1984 samples (Table VI) for comparison.

Groundwater Monitoring Plan for Closed Disposal
Area on Amoco's Riverfront Property, Wood River

MAR 10 1985

RECEIVED

ILL. E.P.A. - D.I.P.
STATE OF ILL.

1. The following wells are to be included in this program:

In the upper groundwater table:

RL-1S
RL-2S
P-5S
RL-14S
P-6S
P-12S
P-9S

(RL = RCRA
program)

In the uppermost aquifer:

RL-1
RL-2
P-5
P-12

Locations of these wells are shown on the attached map.

After the direction of flow in the upper groundwater table is determined under a program previously approved by the Agency, it is proposed that representatives of the Agency and of Amoco meet to determine the locations of additional upgradient and/or downgradient wells that may be required in both the uppermost aquifer and the uppermost groundwater table.

2. Following is the schedule of testing:

First year, quarterly, all wells:

	Max. MG/L		Max. MG/L		Max.
Arsenic	0.05	Selenium	0.01	Radium	5 pCi/l
Barium	1.0	Silver	0.05	Gross Alpha	15 pCi/l
Cadmium	0.01	Endrin	0.002	Gross Beta	4 millirem/yr. (1)
Chromium	0.05	Lindane	0.004	Coliform	1/100 ml.
				Bacteria	
Fluoride	1.4-2.4	Methoxychlor	0.1		
Lead	0.05	Toxaphene	0.005		
Mercury	0.002	2, 4-D	0.1		
Nitrate (As N)	10	2, 4, 5-TP	0.001		
		Silvex			

(1) Maximum dosage per individual based on a consumption of two liters a day.

First year, quarterly, all wells; subsequent years, annually, all wells:

Chloride
Iron
Manganese
Phenols
Sodium
Sulfate

First year, quarterly, all wells; quadruplicate tests on upgradient wells. Subsequent years, semi-annually, all wells; quadruplicate tests on all wells:

pH
Specific Conductance
Total Organic Carbon
Total Organic Halogen

3. Prior to sampling, the groundwater elevation in each well will be determined and recorded.
4. Prior to sampling, each well will be bailed or pumped dry. Samples will be taken after the well has recharged. The bailer or pump will be thoroughly rinsed with distilled or deionized water between wells.
5. One pint will be collected from each well for metals testing and preserved by reducing pH to 2.0 or less by adding nitric acid. One pint will be collected from each well for phenol and total organic carbon and preserved by reducing pH to 2.0 or less by adding sulfuric acid. The preceding two samples will be stored in an ice bath until analyzed. The following samples are to be preserved by placing in an ice bath until analyzed; no preservatives are to be added: 1 quart for pesticides, 1 quart for radiation, and 1 pint for anions and total organic halogen.
6. A chain-of-custody record must be completed for each sample or group of samples having the same destination. These forms are to be returned from the final destination to the environmental engineer at Wood River. The following information must be recorded for each sample:

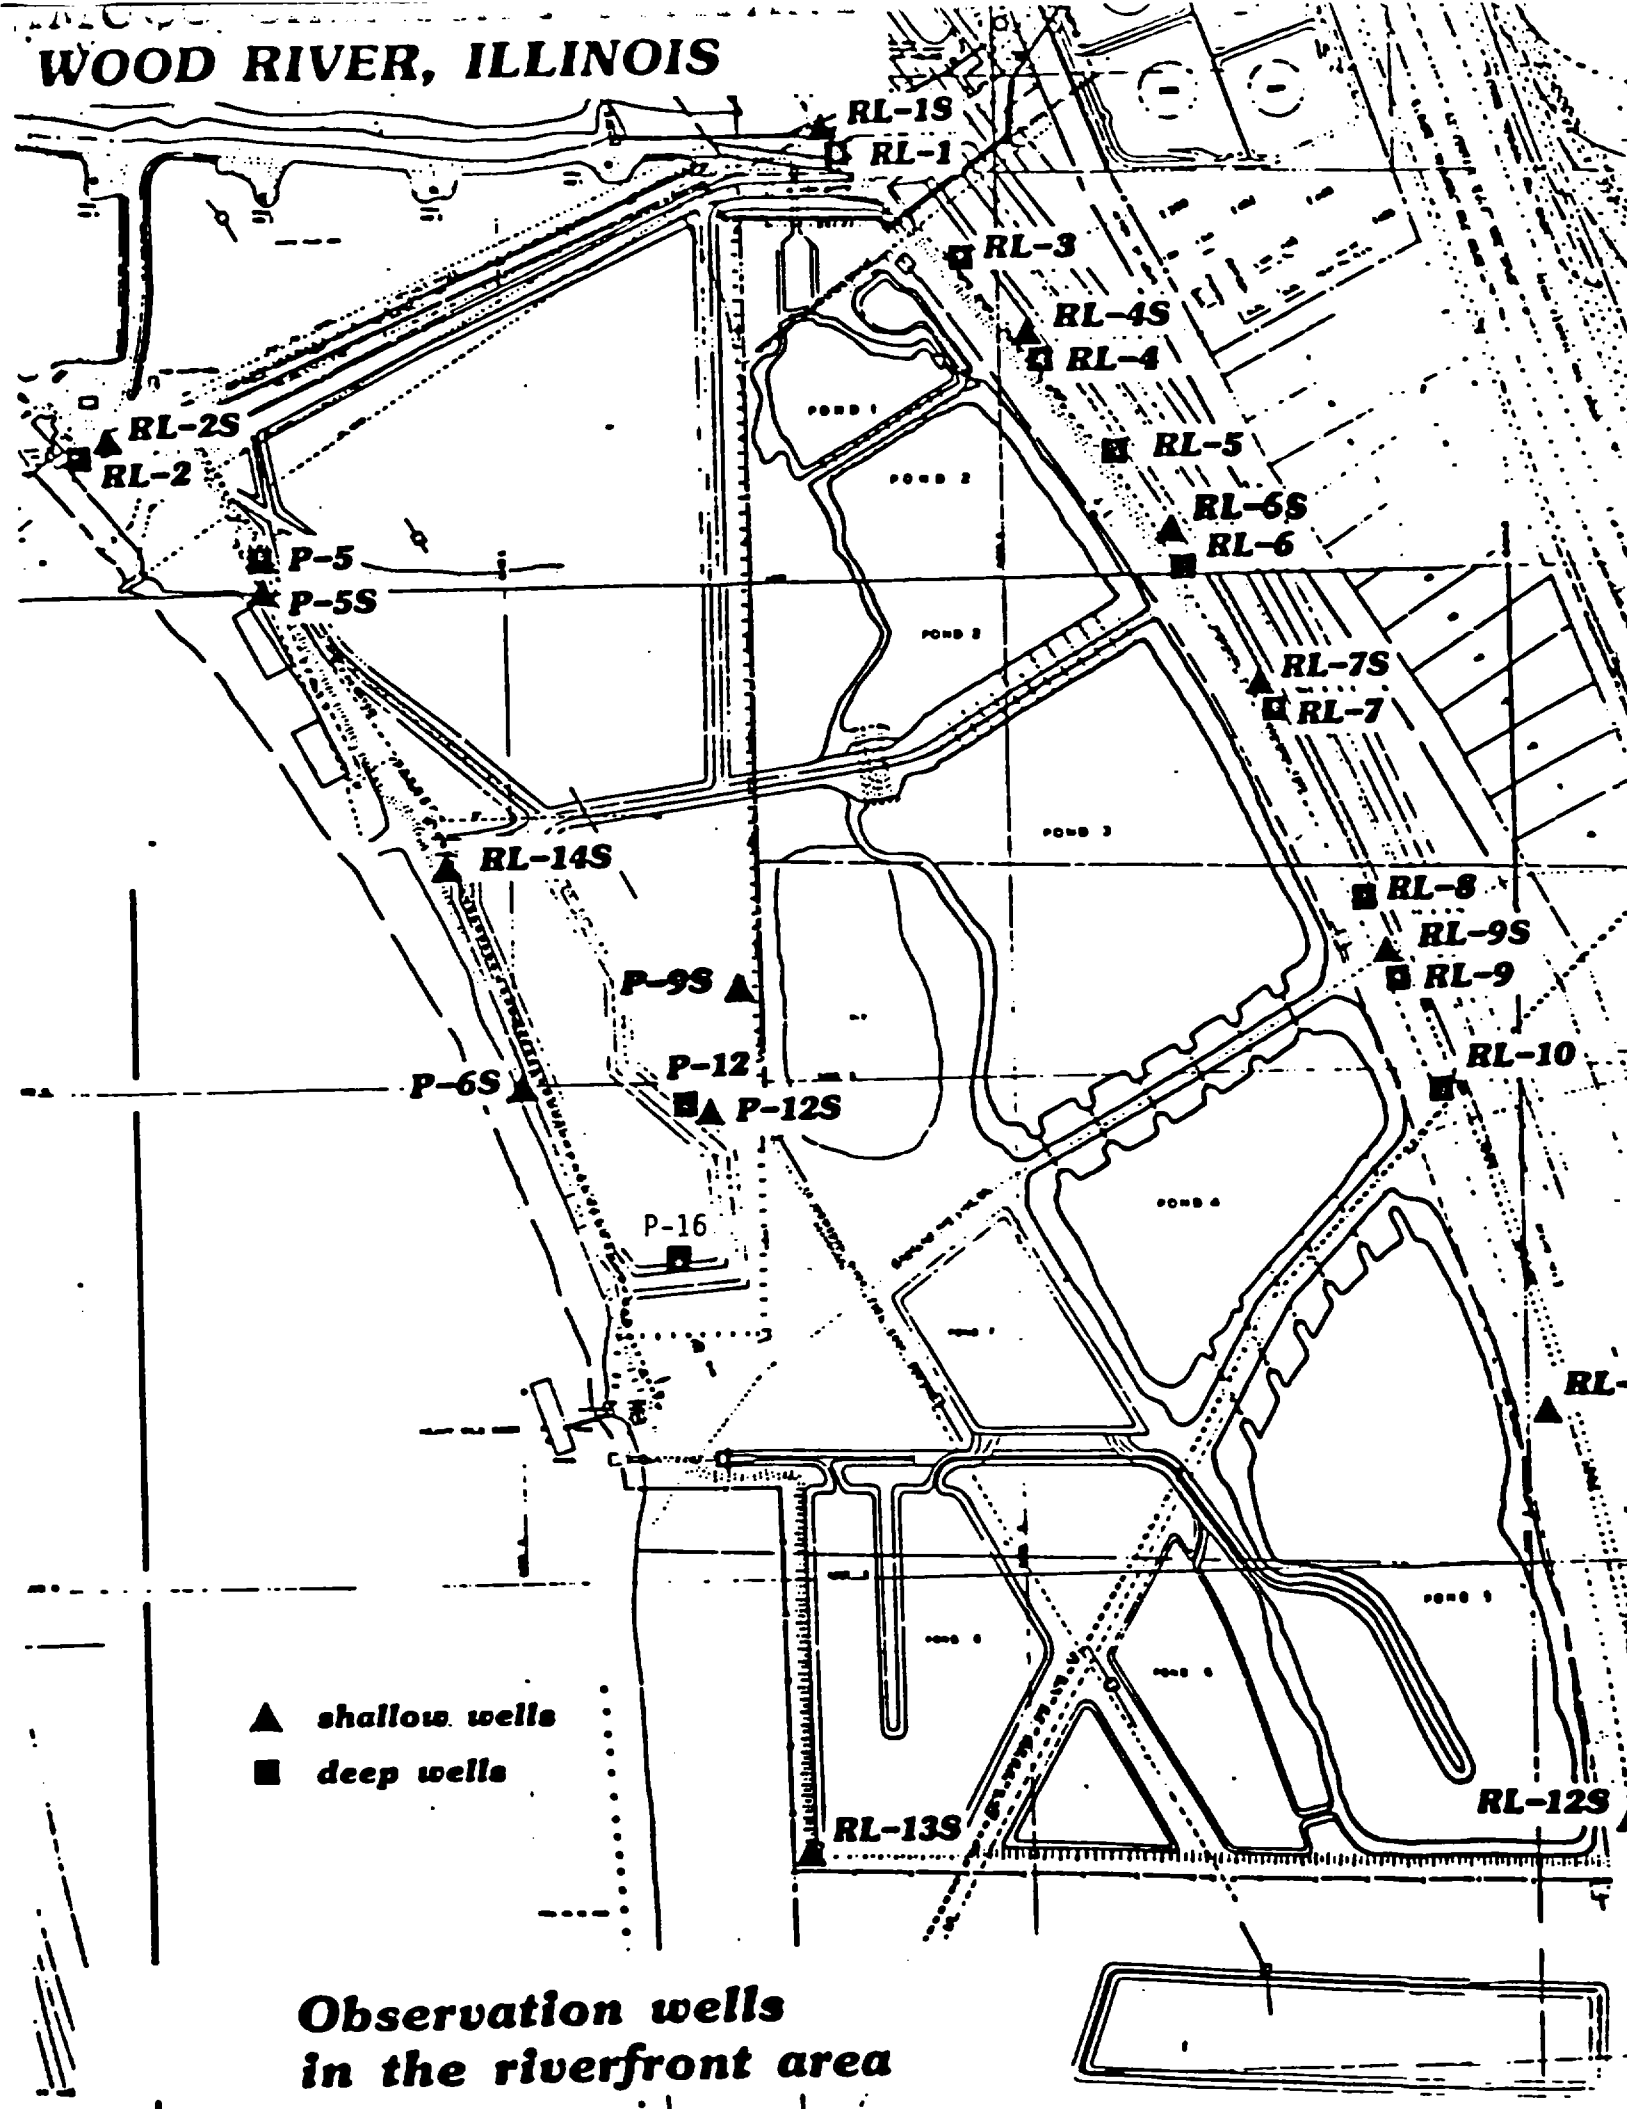

Date
Time
Well No.
Sampler's Name
Preservative
Test(s) Required
Special Instructions

7. pH and specific conductance will be determined in the field as samples are being collected.
8. The following test methods will be used:

Test	Method
Conductivity	Portable Conductivity Meter
pH	Portable pH Meter
Anions	Dionex Ion Chromatography
Arsenic and Selenium	Hydride Atomic Absorption
Lead	Furnace Atomic Absorption
Mercury	Cold Vapor Atomic Absorption
All Other Metals	Inductively Coupled Plasma Spectrometry
Total Organic Carbon	Technicon IV—Persulfate Oxidation
Phenol	4-Aminoantipyrine Method, Without Distillation
Pesticides	Gas Chromatography With Electron Capture

9. All replicate measurements for each indicator parameter (pH, specific conductance, total organic carbon, total organic halogen) from all upgradient wells obtained during the first year shall be combined to provide a background concentration for each of the indicators.
10. In the second and subsequent years, tests for the indicator parameters will be run in quadruplicate on samples from each well.
11. In the second and subsequent years, the arithmetic means of the indicator parameters, as determined semi-annually, will be statistically compared with the background means using Cochran's approximation to the Behrens-Fisher Student's T-Test at the 0.01 level of significance. A statistically significant increase (or pH decrease) in an upgradient well is to be reported in the annual submission of data. If a statistically significant increase (or pH decrease) is found in an indicator parameter in a downgradient well, the well will be resampled, the sample split, and the test(s) repeated on each half. If the repeat tests are confirmatory, the Agency will be notified within seven days.
12. In the first year, test results and groundwater elevations will be reported to the Agency within 15 days after completing the quarterly analyses. In subsequent years, this information, including statistical comparisons, will be reported annually, unless otherwise required by discovery of a statistically significant increase (or pH decrease) in indicator parameters in downgradient wells.
13. All records will be maintained 30 years unless the Agency approves termination of the program at an earlier date.

WOOD RIVER, ILLINOIS

RL-8:	August	2	9	12	<1
	December	9*	26*	<3	<1
RL-9:	August	<1	**	**	<1
	December	16*	26*	<3	<1
RL-10:	August	<1	12	31	27*
	December	22*	42*	27	39*
Drinking Water Standard		5	15	50	1.0

No pesticides or herbicides were found to be greater than the following drinking water standards. The concentrations listed also represent the detection limits.

Endrin	0.0002 mg/l
Lindane	0.004 mg/l
Methoxychlor	0.1 mg/l
Toxaphene	0.005 mg/l
2,4-D	0.1 mg/l
2,4,5-TP Silvex	0.01 mg/l

* = Exceeds Primary Drinking Water Standard

** = Insufficient sample quantity

TABLE IV
1984 GROUNDWATER MONITORING WELL ELEVATIONS
 (Feet Above Mean Sea Level)

<u>Well No.</u>	<u>August</u>	<u>December</u>
RL-1 (Upgradient)	399.18	401.28
RL-2 (Upgradient)	401.40	403.74
RL-3 (Downgradient)	399.10	400.76
RL-4 (Downgradient)	390.79**	402.46**
RL-5 (Downgradient)	397.53	400.99
RL-6 (Downgradient)	398.69	400.38
RL-7 (Downgradient)	398.43	400.11
RL-8 (Downgradient)	398.58	399.36
RL-9 (Downgradient)	399.49	400.76
RL-10 (Downgradient)	400.64	402.09

** Levels distorted due to hydrocarbon layer.

The surface elevation in each of the wells was measured and recorded at each sampling. In August, the level in well RL-1 was depressed due to pumping from a deep production well. This pumping curtailed in late October. As it continues to rebound, it is expected to be hydraulically upgradient of RL-3 through RL-10 as designated. RL-2 is definitely upgradient of the site and the other wells.
